Connect Workstation Requirements

This document provides the minimum and recommended workstation requirements for the BASCONNECT™ software.

Minimum Required Configuration:

Processor	Memory	Display	Operating System	Disk Space	Network
2.0+ghz Dual Core Processor	8 GB Memory	1280x1024 or higher Display	Windows 10	Minimum 5GB free disk space (Encrypted)	100 Mbps Full Duplex Ethernet

Recommendations:

Browser

The recommended browsers include the current versions of Google Chrome, Microsoft Edge, and Mozilla Firefox.

Monitors

If utilizing BASCONNECT's Image Viewer, dual monitors with tilt capabilities are recommended.

Scanner

The BASCONNECT software requires a TWAIN compatible scanner.

VDI/RDS Technology

We strongly recommend not using Virtual Desktop Infrastructure (VDI) or Remote Desktop Services (RDS) with Connect. It is not necessary, as no information is stored on the local machine; all data is AES encrypted in transit. If you choose to use one of these technologies, our team will be unable to support performance issues you may encounter.
