Connect Platform 3.9.5

This document describes the issues included in the PPMCONNECT® software release.

Enhancements

Enhancements include new features and modifications for the following issues:

Application	Category	Issue	Description
Administration	AQI/Outcomes	CNCT-5808	Added the ability to send AQI outcome-related ASA values and modifiers. Also added the ability to designate an outcome as active, inactive or default at the practice and charge entry levels.
	Claims	CNCT-5830	Modified logic to assign non-anesthesia procedures performed by a billable CRNA to the same claim as the anesthesia procedure, when the case includes a physician directing a CRNA.
		CNCT-5892	Modified logic to treat G codes 9362 and 9363 as PQRS codes.
	Facilities	CNCT-2001	Added the *Allow directed only CRNA services* option to the *General Facility Information* tab. If checked, this option allows users to enter a directed CRNA without entering a directing provider. If unchecked, entering a directed CRNA only on a case will produce an error during the *Error Check* process in charge entry. This logic will not work when team billing is set to *Bill Doctor Only* at the plan level.
	Plans	CNCT-5855	Added the *Physical Status* option to the *Claims* tab. Checking this option adds 15 procedure minutes **to the claim** for each billed physical status unit. This option does not literally add procedure minutes to the case; it is a way to report physical status units as procedure minutes on the claim only.

Back Office	Outcomes	CNCT-5808	Added AQI outcome-related ASA value and modifier information to the *Outcomes* table and *Add Outcome* dialog box. Also added the *Add Group* button to the *Outcomes* tab in charge entry for selecting multiple outcomes at once.
