Connect Platform 3.9.7

This document describes the issues included in the BASCONNECT software release.

Enhancements

Enhancements include new features and modifications for the following issues:

Application	Category	Issue	Description
Back Office	AQI	CNCT-6064	Modified the AQI outcome export logic to include the ASA value + ASA modifier in the *Outcome Name* (ex. ASA09A, where "A" is the modifier).
	Cases	CNCT-6065	Added the *ML* (milliliter) option to the **New/Update Procedure > NDC area > Units** field.
		CNCT-6069	Added logic to allow the assignment of PQRS 6030F procedure code to a provider performing a non-anesthesia procedure.
	Claims	CNCT-2266	Added the *Void Claim* rebill option to the *Rebill Type* dialog box (**Active AR > Rebill**). This option resends the selected claim and sends a frequency code of *8* (void) in the applicable data loop (electronic claims) or printed field (paper claims). Also added the *Frequency* column to the **Claims > Electronic Claims** table. Values include *Original*, *Replacement* (rebill) and *Void*. A *Void* entry displays the rebilled claim number and the claim number of the voided claim (*Claim* column).
	Outcomes	CNCT-6116	Added the ability to add, edit or remove outcomes on submitted cases.

Fixes

Fixes include corrections for the following issues:

Application	Category	Issue	Description
Back Office	Reports	CNCT-6108	Fixed the problem causing the *Deposit Analysis Detail* report to group and display checks via check number instead of payment identification number.
